

HAMPANNA GOUDA

Bengaluru, India | +91 80732 76645 | hampannagouda18@gmail.com | linkedin.com/in/hampanna-gouda-39518b25a | github.com/hampannagouda | hampannagouda.github.io

SUMMARY

Software Engineer with a Java Full Stack and DevOps foundation, currently interning at Unisys. Builds AI agent tooling using the Model Context Protocol, machine learning pipelines, and full-stack systems with real domain modeling. B.Tech Computer Science graduate (CGPA 8.63/10.0) with hands-on experience across backend development, DevOps practices, and applied machine learning.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, TypeScript, C, SQL
Frameworks & Libraries: Spring Boot, Hibernate, FastAPI, Flask, React, Next.js, Node.js, Express
Databases: MySQL, PostgreSQL, MongoDB, SQLite
AI / Machine Learning: TensorFlow, Keras, scikit-learn, Model Context Protocol (MCP), Pandas, NumPy, Matplotlib
Tools & Platforms: Git/GitHub, Docker, AWS, Linux, Postman, Tableau

EXPERIENCE

Software Engineering Intern Apr 2026 – Present
Unisys, Bengaluru, India

- Contribute to enterprise software development projects alongside cross-functional engineering teams
- Apply modern software engineering workflows and industry best practices in a production environment
- Collaborate across the development lifecycle from requirements through delivery

Java Full Stack Developer Intern Feb 2026 – Apr 2026
JSpiders, Bengaluru, India

- Completed an intensive Java Full Stack with DevOps training program covering backend development, database design, REST APIs, and deployment practices
- Built REST APIs and backend services using Java, Spring Boot, and Hibernate against a MySQL database
- Practiced Git-based version control and CI/CD-oriented deployment workflows

PROJECTS

AI Stock Prediction System github.com/hampannagouda/ai-stock-prediction
Python, TensorFlow/Keras, scikit-learn, Pandas, Streamlit

- Built an end-to-end pipeline forecasting next-day stock closing price with a two-layer LSTM network trained on 15 engineered technical indicators (RSI, MACD, EMAs, lagged returns)
- Improved prediction accuracy by ~18% through feature engineering; validated the approach against a Random Forest baseline before finalizing the LSTM architecture
- Deployed an interactive Streamlit dashboard for live prediction and visualization

Help Desk Ticket MCP Server github.com/hampannagouda/helpdesk-mcp
Python, FastAPI, Model Context Protocol, SQLite

- Designed a ticketing system exposed both as MCP tools for AI assistants (Claude, Gemini) and as a documented REST API, sharing one business-logic layer
- Wrote design and requirements specifications prior to implementation

VoltFlow — Service Booking Platform github.com/hampannagouda/voltflow
Next.js, TypeScript, Express, PostgreSQL, Prisma, Docker

- Designed a 7-entity relational domain model (bookings, technicians, invoices, reviews, slot availability) for an enterprise-style service booking platform
- Implemented JWT authentication with role-based access control; containerized the full stack with Docker Compose
- Covered core API flows with a Jest/Supertest automated test suite

EDUCATION

B.Tech, Computer Science & Engineering — Dayananda Sagar University, Bengaluru Jun 2022 – Aug 2026
CGPA: 8.63 / 10.0

Pre-University — JMJ PU College, Shiggaon Apr 2022
Percentage: 90%

CERTIFICATIONS

- Oracle Database@AWS Architect Professional — Oracle
- Career Essentials in Software Development — Microsoft & LinkedIn
- Linux Shell Scripting Solutions — Infosys
